

SOM 6/3 D solar control unit

Without discrepancies.

The SOM 6/3 D solar control unit is a simple temperature differential controller for solar heating systems with up to three consumers. The control unit is equipped with an adjustable maximum temperature limit up to 90 °C for each cylinder. The control unit is equipped with an optional priority control. The manual switch enables the selection of constant operation, automatic or OFF. Four temperature sensors capture the temperatures inside the collector and cylinder; they can be checked on the digital display at any time.
